

## How To Measure Curtains and Sheer Curtains

### Measuring a Window with a Pole

**Width A** is the length of the pole.

Measure the distance between the decorative finials at the end of the pole.

**Drop B** is the curtain eye drop for Triple Pleat and Double Pleat. Measure the distance from the bottom of rings to where you want your curtain to finish.

## Measuring a Window with a Curtain Track

**Width A is the length of the pole.**

Measure the total length of the track.

**Drop B is the curtain drop.**

Measure the distance from the top of the track to where you want your curtain to finish.

## Measuring Roman Blinds

We have gathered together instructions on how to measure your Roman Blinds. You may fit the blinds to the wall (Outside Roman blind) or inside a window recess. Our blinds have the wall / ceiling brackets included, as well as screws and wall plugs.

### 1. Measuring a Window for an Outside Roman Blind

#### Width A is the width of roman blind

Measure the width that you would like your roman blind to be. This measurement is called 'Outside Recess' (See fig. 1).

#### Drop B is the roman blind drop

Measure the height where you would like the top of your roman blind to be. Please note that you should include 6 cm above the window frame to allow for the headrail to be fitted to the wall.

Your blind will be made to given measurements.

## 2. Measuring a Window for an Inside Roman Blind

When fitted inside a window recess, the blind will be fitted to the top of the recess. Our blinds have the wall / ceiling brackets included.

### Width A is the width of roman blind

Measure the width of your window recess from wall to wall and DEDUCT 1 cm to ensure your blind can operate smoothly and fits within the recess.

Total width - 1 cm = Total Width for Inside the Inside Roman Blind

This measurement is called 'Inside Recess' (See fig. 2).

### Drop B is the roman blind drop

Measure the height of your window recess from top to sill.
